

# LANDESK® Security Suite

Organized cybercriminals may generate the headlines, but you must protect your organization's critical data from external and internal threats, both intentional and accidental. The multi-layered, user-centered protection of LANDESK® Security Suite safeguards your users and resources against the most sophisticated threats, sharpens risk and threat visibility, eases regulatory compliance, and improves your overall security posture. The solution integrates smoothly with your systems management tools for greater efficiency and control over your IT environment.

## Discover and Inventory All of Your Networked Devices and Software

Active and passive discovery technologies identify and inventory all IP-enabled devices in real time—even so-called “rogue” systems and those behind firewalls. Automatic discovery also finds all the software on those devices, including usage details. And when used with the LANDESK® Cloud Services Appliance, LANDESK Security Suite can inventory systems and devices in the cloud, without the need for virtual private network (VPN) connections.

## Deliver Comprehensive Layered Security to Heterogeneous Environments

LANDESK Security Suite safeguards Windows and Mac OS X with multi-level malware protection, active threat analysis and remediation, firewalls, device hardening, USB encryption, network access control, policy enforcement, vulnerability remediation, and more. The solution can also detect and report vulnerabilities for Red Hat Linux, SUSE Linux, and CentOS systems.

## Ensure Your User Environment is Stable and Secure with Automated Patching

LANDESK Security Suite simplifies patch management with best practices, automated processes, no impact on users, and fast deployment. It patches all devices across your network reliably—even those devices that are on the road, at a remote site, or asleep.

## Protect Your Customer Data—and Your Bottom Line—with Greater Compliance

LANDESK Security Suite provides standardized configurations and workflows for a variety of government and industry regulations, including PCI-DSS, SCAP, FERPA, HIPAA/HITECH, and SOX. This means you can safeguard customer data, preserve your enterprise's reputation, demonstrate compliance to auditors and executives, and protect the bottom line against financial penalties and lawsuits.

## See Threats, Act Quickly, Show Results with Workspaces, Dashboards, and Reports

LANDESK Security Suite also provides an array of reports and executive dashboards to help you monitor the effectiveness of your security efforts. These include detailed reports on policy enforcement, compliance levels, user behavior, patch status, real-time security outbreak alerts, and much more.

## Reduce Risk by Integrating Endpoint Security with Systems Management

LANDESK Security Suite integrates with LANDESK® Management Suite to unify endpoint security and endpoint management. This enables fast automation of both security and IT management policies, optimizing IT time and resources. LANDESK Security Suite delivers unequaled visibility across IT security and management activities to reduce risk and improve decision-making. Management Suite integration also adds the consolidated, customizable interface of LANDESK Workspaces for the Security Administrator and the enhanced mobile protections of the LANDESK® Mobile Security Suite.

## Detect and Remediate Zero-day and Stealth Attacks with Application Control

Application control leverages a cloud-based file reputation service to ensure that only trusted applications run on users' devices. Host-based Intrusion Prevention System (HIPS) capabilities prevent zero-day exploits, stealth attacks, and any variety of emerging sophisticated threats from compromising your environment.

## Harden Endpoints with Device and Connection Blocking

Device control capabilities let you limit the types of external devices or connections that can be accessed by user endpoints based on user location. The solution can also detect and lock out malware residing on storage devices that connect to endpoints. Further, it will log what files are copied to external devices for security auditing purposes.

## Manage and Secure Remote Devices

The solution uses FIPS140-2 certified encryption to secure management data of remote devices connected through the LANDESK® Cloud Services Appliance.

## Integrate Your Preferred Antivirus Solution

In addition to providing LANDESK® Antivirus Manager to protect against known malware, LANDESK Security Suite integrates with and lets you manage third-party antivirus solutions of your choice.
